

SYNOPSIS

Industrial Training Project

Project Title: Tyre Factory ERP Management System

Technology: PHP, MySQL, JavaScript, HTML, CSS, Bootstrap

Submitted By: Gagan Kumar Shah

Department: Computer Science & Engineering

Training Duration: 6 Months

Session: 2026

Guru Nanak Dev Engineering College

About the Project

The Tyre Factory ERP Management System is an industrial ERP software developed for managing tyre manufacturing operations including HR, Inventory, Production, Dispatch, Logistics, CRM, and Reporting.

Objective of the Training

- To understand industrial ERP workflow.
 - To automate tyre factory operations.
 - To develop practical backend and frontend skills.
 - To integrate industrial modules into a centralized ERP platform.
-

Hardware & Software Requirements

Hardware:

Intel Core i5/Ryzen 5, 8GB RAM, SSD Storage.

Software:

Windows 10/11, PHP, MySQL, XAMPP, HTML, CSS, JavaScript, Bootstrap.

ERP Modules

HR: Employees, attendance, payroll.

Inventory: Raw material stock management.

Production: Mixing, building, curing operations.

Dispatch: Logistics, invoice, dispatch management.

CRM: Customers, sales orders, payment tracking.

Reports: Analytics and operational reporting.

ERP Workflow

Customer Order → CRM → Inventory → Production → Dispatch → Invoice → Payment → Reports

Contribution of the Project

- Reduces manual work.
 - Improves stock visibility.
 - Tracks production and dispatch in real time.
 - Provides centralized industrial management.
-

Training Schedule

Month 1: ERP Planning

Month 2: HR & Database Design

Month 3: Inventory & Production

Month 4: Dispatch & Logistics

Month 5: CRM & Reports

Month 6: Testing & Deployment

Role During Training

Worked on backend development, ERP workflow integration, database management, report generation, UI improvements, debugging, and industrial module linkage.

Conclusion

The project demonstrates industrial workflow automation using ERP architecture for tyre manufacturing industries.
